

MMU STORAGE ASSEMBLY

Version 2024-04-19

TABLE OF CONTENTS

Introduction	04
Hardware Reference	07
Frame	12
A/B Drive and Idler	22
Y Axis	40
Z Axis	62
X Axis	98
Belts	118

Print Bed	138
StealthBurner	162
Wiring Prep	164
Electronics	180
Controller Prep	202
Wiring	206
Skirts	238
Panels	260

INTRODUCTION

THE MMU STORAGE PROJECT

This project is meant to be used with an MMU like the ERCF (<https://github.com/EtteGit/EnragedRabbitProject>) and aims to add on seamlessly to VORON printers design wise, while keeping your filament dry.

Currently this project has alpha status and is not fully finished. Some prototypes are built, but not all features are present or fully fledged out.

For example future revision may use a heater to dry up already wet filament, therefore high temperature tolerant materials (e.g. polycarbonate instead of acrylic panels) are used. If the project deviates from that, it might switch to using acrylic panels.

ACKNOWLEDGMENTS

This project is heavily inspired by VORON DESIGN and even uses parts from the VORON TRIDENT project (<https://github.com/VoronDesign/Voron-Trident>), namely:

- STLs/Panels/bottom_panel_clip_x4.stl
- STLs/Panels/bottom_panel_hinge_x2.stl
- STLs/Panels/midspan_panel_clip_4mm_x7.stl
- STLs/Panels/corner_panel_clip_4mm_x8.stl
- STLs/Skirt/[a]_corner_baseplate_a_x2.stl
- STLs/Skirt/[a]_corner_baseplate_b_x2.stl
- STLs/Skirt/corner_a_x2.stl
- STLs/Skirt/corner_b_x2.stl

This project also heavily relies on the INTEGRATED AUTO-REWIND SPOOL HOLDER by VINCENT GROENHUIS (<https://www.thingiverse.com/thing:3781815>). Without this design, this project would not be possible!

Special Thanks to the VORON TEAM and VINCENT GROENHUIS for their awesome work!

INTRODUCTION

FILE NAMING

The STL file naming convention is the same as for VORON designs, namely:

PRIMARY COLOR

Example `z_joint_lower_x4.stl`

These files will have nothing at the start of the filename.

ACCENT COLOR

Example `[a]_tensioner_left.stl`

We have added “[a]” to the front of any STL file that is intended to be printed with accent color.

QUANTITY REQUIRED

Example `[a]_z_belt_clip_lower_x4.stl`

If any file ends with “_x#”, that is telling you the quantity of that part required to build the machine.

PART PRINTING GUIDELINES

The print guidelines are also the same as for VORON designs, namely:

3D PRINTING PROCESS

Fused Deposition Modeling (FDM)

INFILL TYPE

Grid, Gyroid, Honeycomb, Triangle or Cubic

MATERIAL

ABS

INFILL PERCENTAGE

Recommended: 40%

LAYER HEIGHT

Recommended: 0.2mm

WALL COUNT

Recommended: 4

EXTRUSION WIDTH

Recommended: Forced 0.4mm

SOLID TOP/BOTTOM LAYERS

Recommended: 5

INTRODUCTION

REPORTING ISSUES

Should you find an issue in the documentation or have a suggestion for an improvement please consider opening an issue on GitHub (<https://github.com/Zergie/MMU-Filament-Storage/issues>). When raising an issue please include the relevant page numbers and a short description; annotated screenshots are also very welcome. We periodically update the manual based on the feedback we get.

THIS IS JUST A REFERENCE

This manual is designed to be a simple reference manual. Building this project can be a complex endeavor and for that reason we recommend downloading the CAD files off our GitHub repository if there are sections you need clarification on. It can sometimes be easier to follow along when you have the whole assembly in front of you.

HARDWARE REFERENCE

BUTTON HEAD CAP BOLT (BHCS)

Metric fastener with a domed shape head and hex drive. Most commonly found in locations where M5 fasteners are used.

ISO 7380-1

SOCKET HEAD CAP BOLT (SHCS)

Metric fastener with a cylindrical head and hex drive. The most common fastener used in this project.

ISO 4762

HEX NUT

Hex nuts couple with bolts to create a tight, secure joint. You'll see these used in both M3 and M5 variants throughout this guide.

ISO 4032

HEAT SET INSERT

Heat inserts with a soldering tip so that they melt the plastic when installed. As the plastic cools, it solidifies around the knurls and ridges on the insert for excellent resistance to both torque and pull-out.

POST INSTALL T-SLOT NUT (T-NUT)

Nut that can be inserted into the slot of an aluminium profile. Used in M3, M4 and M5 variants throughout this guide. Often also called "roll-in t-nut".

608 BEARING

A ball bearing used on the auto rewind filament spools.

HARDWARE REFERENCE

BALL-END DRIVER

Some parts of this design require the use of a ball-end hex driver for assembly. We recommend you get a 2.0mm, 2.5mm and 3mm one.

2.5MM HEX DRIVER

The 2.5mm hex driver will see a lot of use in this build. A quality driver is strongly recommended.

M5 TAP

Some extrusions need additional M5 threads. A tap with a tap handle will be needed. Be aware that for tapping aluminum you also need a lubricant for example tapping oil or WD40. Pre-tapped extrusions can also be used.

METAL DRILL BIT

Some extrusions also need access holes for the blind joints. A metal drill bit between 2-6 mm will work. Even not strictly necessary getting also a center punch can increase accuracy.

HARDWARE REFERENCE

BLIND JOINT BASICS

Blind Joints provide a cost effective and rigid assembly method.

The head of the BHCS is slid into the channel of another extrusion and securely fastened through a small access hole in the extrusion.

If you've never assembled one before we recommend you watch the linked guide.

FRAME

FRAME

SORT EXTRUSIONS

Collect your extrusions and sort them by length. We will highlight the extrusions used in each step and label them as shown on this page

A Extrusion – 420mm Length
B Extrusion – 500mm Length
C Extrusion – 200mm Length

FRAME

10MM Drill Guide

For blind joint access holes located at the edge of the B extrusions.

233MM Drill Guide

For the upper drawer support blind joint access holes located on the B extrusions.

FRAME

B Extrusion

DRILL ACCESS HOLES

Drill access holes for the blind joint 10mm from the edge of the extrusion.

DRILL ACCESS HOLES

Drill access holes for the blind joint 233mm from the left edge of the extrusion

DRILL ACCESS HOLES

Drill access holes for the blind joint 10mm from the edge of the extrusion.

FRAME

A Extrusion

C Extrusion

TAP M5
Tap both ends of the extrusion
for a M5 screw.

FRAME

M5x16 BHCS

Blind Joint Plugs

BLIND JOINT PLUGS

To keep as much moisture out as possible, we need to plug all blind joints. These plugs do fit very tightly and need some force

MIND THE ORIENTATION

The extrusions are going to be used in this section. Prepare them as shown above. Mind the orientation of the center hole.

B Extrusion

Location of Blind Joints is WRONG !!!

ONLY TWO BLIND JOINT PLUGS
Mind to install only two Blind Joint Plugs here.

FRAME

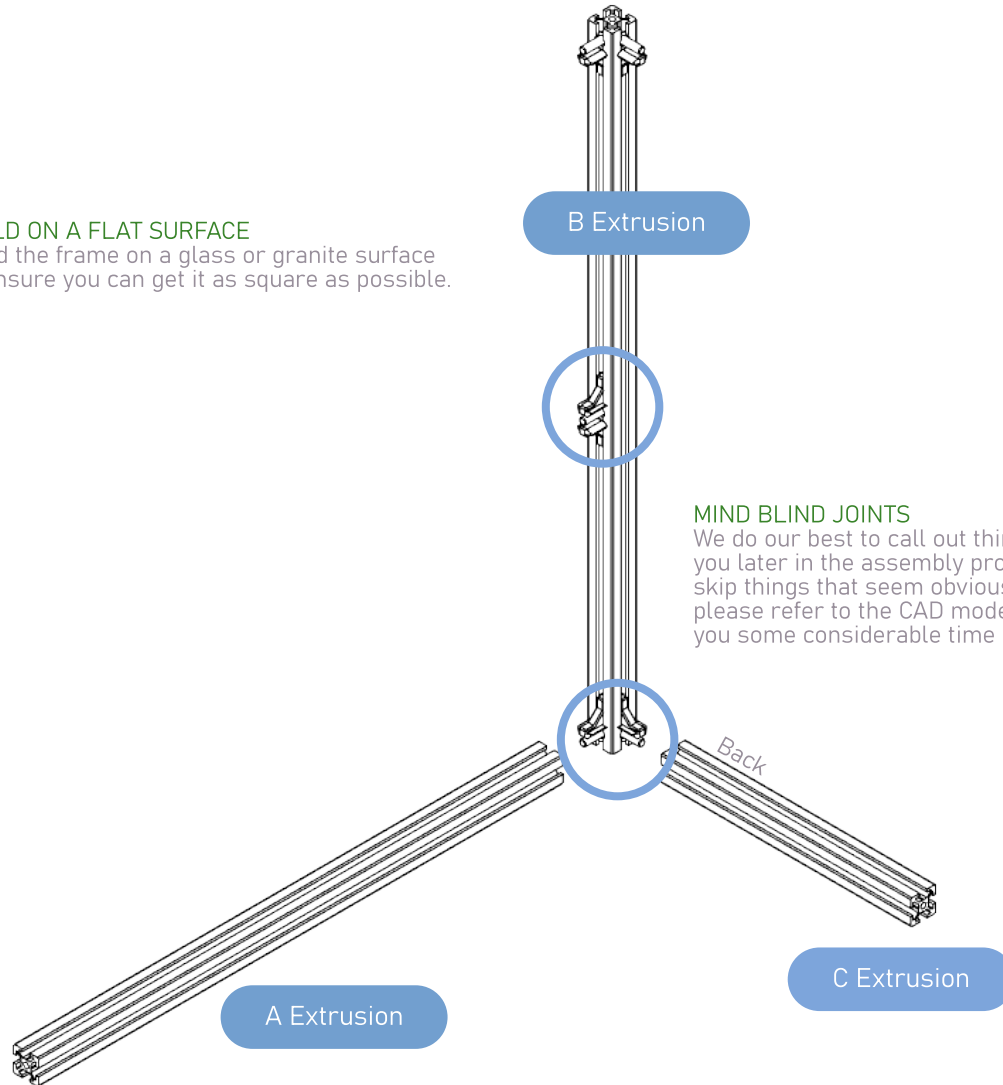

ALIGN COMPONENTS
Align Blind Joint Plugs and Screws
as shown above.

FRAME

BUILD ON A FLAT SURFACE

Build the frame on a glass or granite surface to ensure you can get it as square as possible.

MIND BLIND JOINTS

We do our best to call out things that may bite you later in the assembly process but may skip things that seem obvious to us. If in doubt please refer to the CAD model, it might save you some considerable time down the road.

FIRST BLIND JOINT

This design relies on blind joints to assemble the frame. We outlined the basics of blind joints on page 7.

If you've never assembled one before we recommend you watch the linked guide.
